CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

01 Run the tutorial first.

Follow **Ready to Code Some C# NET** in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use your own story · Original Story Signal

02 Find the parts.

> **Visual Studio note:** A newer Console App may use top-level statements, which means the compiler supplies the `Program` class and `Main` method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;

class Program
{
    static void Main()
    {
        Console.WriteLine("What is your name?");
        string userName = Console.ReadLine();
        Console.WriteLine("Hello, " + userName);
    }
}
```

Library **Class** **Main method** **Prompt** **Input + variable** **Output**

03 Explain each label in your own words.

Class

A container that groups related code.

class Program

Main method

The method where the console program begins.

The program begins at "Console.Writeline" because that is the first output the user sees.

Method / function

A named action. In C#, a function inside a class is called a method.

A method is using WriteLine in order to ask for the user's name.

Variable

A named place that remembers a value.

userName

Console.WriteLine

Displays a line of text in the console.

What is your name?, Hello, userName

Console.ReadLine

Waits for typed input and returns that text.

The user's username

04 Trace the data.

INPUT

The learner will type in a name that the machine will address them by.

VARIABLE

"string userName = Console.ReadLine();" stores that information.

OUTPUT

The app will display "Hello, 'userName'"

05 Plan your pathway version.

What will you replace or add after the tutorial app works?

I will create a story about myself. I will share facts about myself then potentially progress it to create a full fictional story.

Optional ways to go beyond the tutorial

- [x] **Another prompt**
- [ ] **A decision or conditional**
- [ ] **ASCII art in the console**
- [ ] **An image in README.md**
- [ ] **Another tested feature**

06 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub `Week6/evidence` folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
